

Z-SERIES ALL ALUMINUM SILL

Endura has redefined how all aluminum sills are designed. For high heat environments, with features and benefits of the Classic Z Series Sill. Modularity, protection from water & air infiltration, durable in extreme heat - that's the **New Z Series All Aluminum Sill**.

High Dam Overlap Cap sits higher than traditional dams to create an improved barrier to water infiltration, even as wind speed increases.

Sealed Adjustment System prevents debris and water from damaging the cap height adjustment screws. Cap plugs also maintain a clean finished look to the overall sill.

Synthetic or wood substrates available to fit your application needs. Choose from full or block designs.

Integrated seal keeps water out.

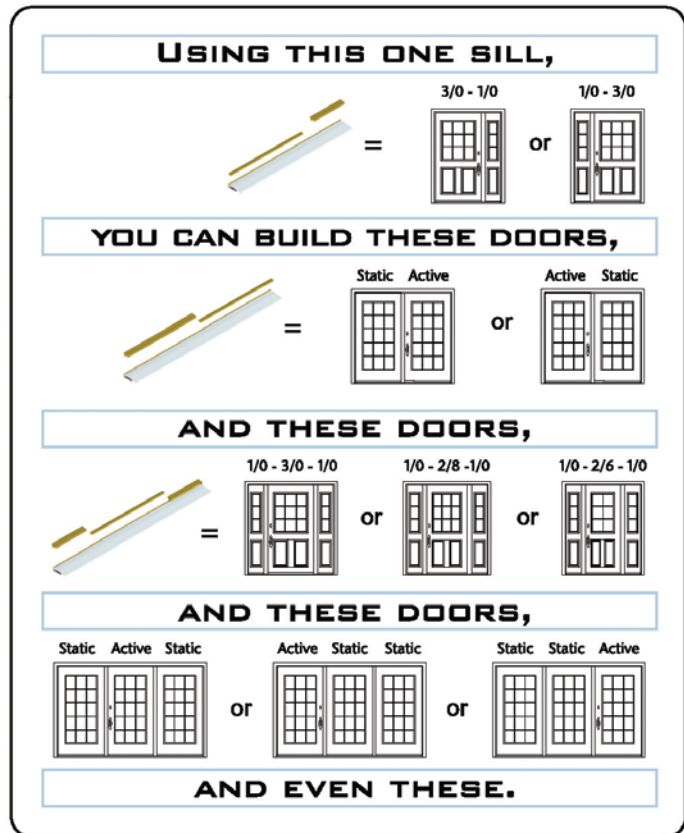

Sidelite Seats provide a continuous seal to prevent leaks and offer perfect sidelite panel placement along our continuous sill design. Available in aluminum or PVC, these patented and repositionable seats ensure consistent, accurate positioning of the sidelite panel, which allows for speed and efficiency in door assembly. Perfect match for Sidelite or Patio Systems.

MODULARITY

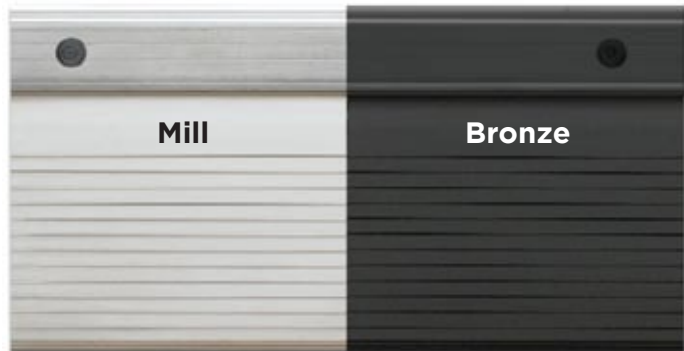

These patented and repositionable seats ensure consistent, accurate positioning of the sidelite panel, which allows for speed and efficiency in door assembly. Perfect match for Sidelite or Patio Systems.

Available in 3-9/16" and 4-9/16" sill widths. An extender cavity on the 4-9/16" sill accommodates sill extenders and nailing fins.

FINISHES

Finishes - the all aluminum sill is available in mill and bronze finishes.

Z-Series All Aluminum Sill out performs all the competition

	Cap	Sealed Adjustment	Modularity	Sidelite Seats	Z Series Component
ALL ALUMINUM SILL	High dam with integrated seal	High heat cap plugs	Re-configure with moveable cap & sidelite seats	Continuous sill for accurate positioning; all aluminum for high heat environments	Interchangeable components with regular Z-Series
OTHER GUYS	No seal	Cap plugs fall off	None	None	Unique components required
