AVAILABILITY

Replacement Aluminum is available to order as follows:

Pre-Cut: Cut to customer specified length and width. To order, please reference overall width of the sill to be repaired, the desired net length and finish:

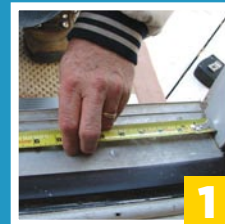

Standard Width/Length: Replacement aluminum to fit widths as wide as 7 13/16" sills in 3/0 and 6/0: Customer or installer to cut to size for required application.

As good as New!

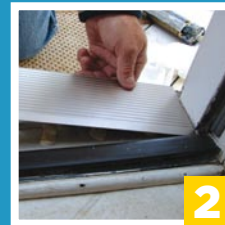

On-site aluminum replacement decks

Repair sills that are damaged on the construction site or from the wear and tear of long time use. On-site damage that occurs to a sill while the home is still under construction is the most common reason for sill damage, scratching or discoloration. Also, over time aluminum can become damaged or oxidized and stained from the simple over-use of the entrance way or from reaction to cleaning chemicals. The sill deck can become ugly, dirty, stained and scratched. Endura's solution for easy field repair to damaged aluminum decks is to fit and place a fresh piece of aluminum on top of the damaged sill.

Repair is as easy as 1,2,3

STEP 1: Measure existing sill and cut replacement aluminum to size.

STEP 2: Apply sill repair aluminum on top of existing sill with construction adhesive.

STEP 3: Caulk ends of sill repair aluminum.
