It's how doors work.™

New JambDam™ frame adapter protects against water and adapts jamb to sill profile.

Endura Products, Inc. will introduce the JambDam™ frame adapter at the AMD 2004 Show in Salt Lake City, Utah demonstrating to prehangs and millwork distributors how the adapter is a cost effective solution in providing a protective barrier against water damage and easing jamb conversion between sill profiles.

The JambDam frame adapter raises the jamb stop and rabbet 1/4 inch off of the ground, acting as a moisture barrier, preventing water from wicking up the jamb and avoiding discoloration, rotting and the inevitable callbacks such damage causes.

The PVC JambDam also allows easy conversion from low- to high-profile jambs. Attaching the JambDam to the bottom of a low-profile frame raises the frame to accommodate high dam sills. This simple procedure eliminates the need to purchase new jambs, a positive with prehangs and door shops alike in avoiding excess inventory.

The frame adapter is available in inswing and outswing versions. For outswing applications, the need to notch the sill is removed, maintaining a more reliable moisture barrier at the threshold.

Prehangs and Millwork Distributors can see the JambDam Frame Adapter, along with many other new and enhanced products, at the AMD 2004 Show in Salt Lake City, Utah, booth #1023 October 9-13, 2004.

About Endura Products, Inc.

Endura Products, Inc. manufactures entry door component systems that improve door construction, door installation and long-term performance in the home. Endura components improve functionality, maximize the seal between the door and the opening, and reduce air and water infiltration. For more information call (800) 334-2006 or visit www.enduraproducts.com.
