It's how doors work.™

SB800 Concerns? Endura Products Provides Solutions Through High Performance Components that Make Doors Work Better.

Greensboro, NC – Ensuring that doors “shall not leak” in accordance with SB800 can be a challenge. Entry door units are the most used part of any home, and even a door of the highest quality will simply not work without the proper components. However, by means of thorough research, testing, and innovation, Endura Products, Inc. has developed a total solution that eliminates water infiltration for the life of the unit. Focusing on “how doors work,” Endura will feature this system as well as seven other new or improved components for entry door systems at PCBC® 2004, to be held at the Moscone Center in San Francisco, June 16-18, 2004.

Force 5™ Door Systems from Endura combine the strengths of its top performing products. Z-Series no-rot all composite sills are impervious to water, eliminating moisture damage beneath the sill. Continuous sills and headers add structural integrity to the door unit, eliminating racking and alignment problems. High performance weatherseals including Force 5 Weatherstrip, leading edge door bottoms, and Simple Solution™ Corner Pads are uniquely designed to maximize the seal between the door, frame and sill. Finally, the Ultimate Astragal and Ultimate Astragal Lite have a flush bolt with an integral boot that forms a patented 3-point seal, solving the problems of air and water infiltration so common with French doors. The Force 5 Lifetime Warranty that accompanies this system allows you to install a unit you can stand behind.

Through its unique focus on the entire door system lifecycle, Endura helps builders and their customers avoid common obstacles to successful building and remodeling projects – callbacks for repair and unplanned product replacement, customer service problems and ultimately, lawsuits.

“We focus on how doors work as a unit with a comprehensive line of components,” says Endura CEO Bruce Procton. “Entry doors only perform as well as the components with which they are built. It's not the door: it's how doors work.”

About Endura Products, Inc.

Endura Products, Inc. manufactures entry door component systems that improve door construction, door installation and long-term performance in the home. Endura components improve functionality, maximize the seal between the door and the opening, and reduce air and water infiltration. Products to be featured at PCBC 2004 include the expanded Z-Series™ family of sills, the Door Sill Pan and Sill Extender Mounted Nailing Fin, the JambDam™ frame adapter, the Ultimate Astragal Lite, Mull Boots for sidelite systems and a new line of Pre-Finished Exterior Frame Systems. For more information call (800) 334-2006 or visit www.enduraproducts.com.
