It's how doors work.™

Sloping sill pan by Endura ensures all precautions have been taken in combating moisture intrusion.

Liability is a scary issue when you are looking at entire communities subject to mold and damaged interiors from moisture intrusion. You can make sure that your customer is using a totally composite product but when it comes down to it-improper installation and an unprotected rough opening allows for too much liability. Insurance rates are skyrocketing and all over new building codes and senate bills are being passed scrutinizing whom is responsible for damages. Have you done all you can to protect the home? Endura Products, Inc. forges into further protecting the performance of entry systems in the home by introducing the sloped sill pan.

An additional enhancement to door installation, the new PVC sill pan protects the frame from rot and warping, and reduces the risk of water damage to interior carpets and hardwood floors. The sill pan is mounted in the rough opening and provides a final impervious barrier to moisture under the threshold, eliminating the need for caulking.

Both accessories, along with six other new and innovative products, will be shown at PCBC, booth #5425, in San Francisco, CA, June 15-18, 2004.

About Endura Products, Inc.

Endura Products, Inc. manufactures entry door component systems that improve door construction, door installation and long-term performance in the home. Endura components improve functionality, maximize the seal between the door and the opening, and reduce air and water infiltration. For more information call (800) 334-2006 or visit www.enduraproducts.com.
