It's how doors work.™

Endura shows how Mull Boots prevent water damage and callbacks at the 2005 International Builders' Show.

At the 2005 International Builders' Show, Endura Products, Inc. will demonstrate for how to prevent water damage to mulls and associated callbacks through the use of the Endura Mull Boot—a simple PVC solution for sidelite systems.

Through precision engineering and design, the Mull Boot was designed as a mull endcap that creates a water-resistant barrier between the sill and mullion. The Endura Mull Boot prevents water from saturating the bottom of the mullion and wicking up the end grain of an unprotected mull, thus rotting and discoloring the wood.

Injection-molded with easy-to-paint plastic, the Endura Mull Boot comes in five sizes, inswing and outswing and is designed to enhance sidelite applications of the Endura Z-Series™ family of sills.

The Mull Boot and many other product solutions from Endura Products can be seen at the 2005 International Builders' Show, Endura booth #W6061, in Orlando, FL, January 13-16.

About Endura Products, Inc.

Endura Products, Inc. manufactures entry door component systems that improve door construction, door installation and long-term performance in the home. Endura components improve functionality, maximize the seal between the door and the opening, and reduce air and water infiltration. For more information call (800) 334-2006 or visit www.enduraproducts.com.
