How is a builder using our product to solve a building challenge: **SureSill Sloped Sill Pan**

Endura Products to distribute the innovative Suresill™ Sloped Sillpan for doors and windows

GREENSBORO, NC – May 2005 – Are you tired of improperly installed door units causing leaks and damage to the interior of the home? The new, innovative SureSill™ sill pan distributed by Endura Products, Inc. virtually eliminates this common issue on exterior door installations, limiting builder liability across the board. Designed to prevent water infiltration, the SureSill™ offers greater performance than traditional entry door and window prevention attempts.

The SureSill™ Sloped Sill Pan, manufactured by SureSill, Ltd., is a new and innovative approach to the increasingly demanded sill pan. SureSill™ pans address all shortcomings of sill pans currently on the market. It is more cost effective than self fabricated designs commonly used by many builders, and actually functions to drain water effectively with a unique built in channel to prevent water damage. Inferior products previously offered may have had you wondering- just where does the water go? SureSill™ offers a patent pending durable integrated drainage system with a recessed slope and horizontal surface to ensure that any moisture in the pan is directed to the exterior of the house.

The SureSill™ pan is available in 4 9/16" and 6 9/16" widths and has a unique easy to use 3-part design, comprised of a channel plate (pan) and end caps, and fits any door or window opening. The SureSill™ *Lock-in Channel Plate* can be cut to the exact measurement of any window or door opening on site by the installer. The plate is joined with a pair of *Lock-in Corners* through a keyed profile and secured with an approved bonding sealant, creating a sloped and drainable, waterproof sill pan. The innovative 3-piece design fits every opening, every time, no need for special orders for different sized entry ways.

"Endura is uniquely focused on the entire entry door system lifecycle," said Tessa Rodriguez, California Sales Associate for Endura. "Endura helps prehangars, builders and their customers avoid common obstacles to help ensure successful building and remodeling projects—eliminating callbacks for repair and unplanned product replacement, and customer-service problems."
