BAYER BUILT CARRIES FRAMESAVER: LIFETIME WARRANTIED DOOR FRAME

Greensboro, NC - July 31st, 2008 - Bayer Built Woodworks, Inc. is now proud to offer FrameSaver as the standard frame in its entire line of exterior door units.

FrameSaver provides the highest level of resistance to moisture, guaranteed against rot and insect damage. With a FrameSaver wood exterior door frame, builders and homeowners can now achieve a complete, weather-resistant door frame. Most manufacturers end-treat ordinary wood or use an alternative species of wood on the bottom of the frame.

"FrameSaver has taken the worry out of wood door frames," said Debbie Piner, Endura Marketing Manager. "We want to extend the benefits of our Composite Z Series Sills to those searching for a composite door frame that can be tooled and machined like any traditional wood frame. FrameSaver's Lifetime Warranty offers protection to the original and subsequent homeowners."

The composite material fingerjointed at the base of the frame results in 100 percent protection from the wicking of water. Other end-treatments or the use of alternative species, only provide initial protection that can quickly fail under field conditions. Endura also applies a 90 Day primer to FrameSaver and standard wood frames to provide protection on the job site. The frame can be painted or stained to match any door, and last-minute trimming and machining adjustments can be made quickly and easily at the site, if needed. Door frames are offered in a variety of different sizes and lengths to fit any job.

About Bayer Built Woodworks, Inc.

A family business, Bayer Built has been providing quality "prehung to order" doors and millwork since 1983. Today, they deliver their products to eight states in the Midwest region. For more information on Bayer Built's products please visit www.bayerbuilt.com.

About Endura Products, Inc.

Endura Products, Inc. manufactures entry door component systems that improve door construction, door installation and long-term performance in the home. Endura components improve functionality, maximize the seal between the door and the opening, and reduce air and water infiltration.
