

New 650 Proud Edge Weatherstrip

Product Summary

The NEW 650 Proud Edge Weatherstrip is an exciting addition to Endura's weatherstrip family. The 650 Proud Edge bridges the edges of "bull nose" and "scant thickness" doors, increasing contact with the panel face and eliminating infiltration when subjected to high air pressure. "Bull nose" and "scant thickness" profiles are more prone to fail high-pressure air and water testing due to reduced contact between the door and standard weatherstrips. The 650 Proud Edge weatherstrip provides 0.650" of reach and easily substitutes for standard QEBD-650.

The 650 Proud Edge Weatherstrip is constructed of a cellular lite foam, surrounded by a long-life polyethylene liner, that is easily installed into framing kerf slots like standard weather stripping.

Key Features

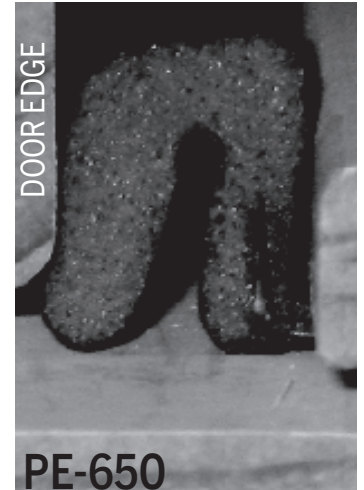

- Designed specifically to work with "bull nose" and "scant thickness" panels.
- Inserts into jamb, header and mullion kerf slots like standard weatherstrip
- Provides enhanced door unit performance

Product Availability

Immediately - Bronze, Tan and White
Lengths: 36", 81" and 96"

Packaging Quantities

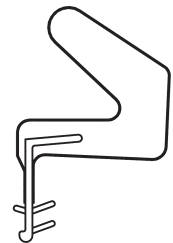

100 per box
1800 per skid (no mixing lengths per skid)

Patent D571, 932.
